

SPACE 2018: TIBOT TECHNOLOGIES CONFIRMS ITS PIONEERING ROLE IN POULTRY ROBOTICS

From 11 to 14th September, TIBOT Technologies participated to the 32th edition of the SPACE Exhibition. By presenting its poultry robot Spoutnic and its new customizable accessories, TIBOT, once again, sets itself as a pioneer in poultry robotics.

THE ROBOT TAILORED TO YOUR PRODUCTION NEEDS

For its 3rd participation in SPACE, TIBOT technologies presented Spoutnic and its new customizable animation accessories. «Now, we have about 40 robots deployed in 8 different countries. Based on this experience and feedbacks from our customers, we know the “one fits all” model is not accurate. You do not move turkeys like hens nor breeders like layers» explains Yanne Courcoux, founder and CEO. «Today, we give new tools to the grower to adapt his/her robot to the closest of his/her production needs».

Indeed, the start-up developed a controller which allows the poultry farmer to personalize the animation of the robot according to its production and working organization: choice of visual and sound stimuli, optimization of its trajectory, speed adjustment, working times schedule, etc.

SPACE 2018, A KNOWLEDGE HAILED BY THE MARKET’S ACTORS

For four days, the TIBOT team welcomed more than a dozen of the largest production organizations and fifty poultry farmers. This sustained interest in the product confirms the latest commercial successes with Tyson Food (USA) and Wiesenhof (Germany), food companies specialized in the processing and trading of poultry. SPACE was also an opportunity to engage discussions with distributors for new export markets.

DISTRIBUTION AGREEMENT WITH THE EQUIPMENT SUPPLIER SODALEC DISTRIBUTION

The SPACE exhibition was the opportunity to announce that TIBOT technologies and SODALEC DISTRIBUTION (SODIS) agreed to join their efforts in commercializing the Spoutnic robot. The robot and its accessories have been available since the beginning of September.

TIBOT Technologies aims to automate tedious and repetitive tasks of the farmer, in order to improve its working conditions, to increase the profitability of his/her exploitation and the welfare of his/her poultry.
